June Monthly Newsletter

IEEE Foothill ExCom/OpCom Monthly Meeting

Prepared by: Max Cherubin

The June 2022 ExCom/OpCom was held via BlueJeans last June 14th, 2022, at 7:05 pm, and it started with the chairman's remarks after some discussion Vice-Chair Osman Ceylan agreed to serve as the Foothill Student Section Coordinator.

Section and Committees

We had one senior elevation, Congratulations Christopher Stewart. Member James Liao whom our membership group worked with to coordinate documentation has submitted his package together with his references; however, the IEEE Elevation committee did not have a meeting in May. Eligible IEEE Members are encouraged to reach out to the section regarding Senior Member elevation.

For Website and Social Media, we had 270 visitors last month and no new members. However, we always encourage all members to actively post their events to our group page to advertise them and gather volunteers.

Student Chapter

CPP, reported by Kayla Scarberry and Sameer Sharma, just had their officer meeting over the summer and preparing for the new set of officers who will take the place of the current officers.

DeVry University conducted a workshop about DevOps using Amazon web services. It will be virtual, and a report about the event is on the next page.

Technical Committees

Scott Wedge did not make it to the Foothill ExCom/OpCom meeting but was able to send a message about the main topics for MTT/AP, and it is about IMS2022. With Ed/CAS, the subject of interest is the Electron Devices Society is considering 2022-2023, the 75th Anniversary of the Transistor. The ED Society is encouraging technical activities related to this. Jonas and Scott are keen to do something but have no plans yet.

Communication Society finally had a vice-chair, which was James Liao, thank you James for stepping up to serve the Section. Now they are trying to get more contact with their members, and they are reaching out to students who might want to volunteer.

Computer Society will have an upcoming event on June 29th, 2022, which is about the Dark, Deep, and Geopolitical on the Internet that talks about the Internet, especially the Darknet on how to access, search, and navigate there with some protections, including the tor browser and Ray is inviting everyone to join the webinar.

Educational Activities, global monitoring technology conference, will have a poster competition for students. Osman encourages the students to join the competition for new experiences and exposure.

Kim Mosley is still working to plan events that would interest the younger students particularly. She will send out a survey to the section that She's hoping she can have one event this year to at least show to others that our WiE is doing something and that they are active.

Consultant's Network Meeting will not have a meeting for this month but rather have it in July with their new schedule, which is the previous schedule since the majority of them would prefer every first Wednesday of the month. So starting next month, Foothill Consultant will return to its original schedule.

DeVry: DevOps using AWS

Presented by: Dr. Nazila Safavi

DevOps is a series of practices combining software development operations. DevOps is targeted to reduce the duration of production and systems development life cycle SDLC, providing Continous Delivery (CD) and Continous Integration (CI) while maintaining high quality products.

Since various DevOps aspects were results of the Agile methodology, DevOps is often paired with the Agile Software Development Approach.

About the Presenter:

Nazila Safavi, is a professor of Engineering & Information Technology, & related courses at DeVry University.

An industry consultant since 1997 and an instructor in the fields since 2003; With PhD is in Information Technology & Management; undergraduate studies in Computer Science at Oxford Brooks University, Oxford, England; and MS in Telecommunications Engineering and Management from Southern Methodist University, Dallas, Texas.

Practical and Industry experiences, include serving Wireless and Telecommunications firms such as Nortel, Ericcson, and DSC Communications Corporation with hands-on specialization in product design and support.
